"Human muscle carbonic anhydrase: gene structure and DNA methylation
patterns in fetal and adult tissues.";
Genes Dev. 1:594-602(1987).
-!- FUNCTION: REVERSIBLE HYDRATATION OF CARBON DIOXIDE.
-!- CATALYTIC ACTIVITY: H(2)CO(3) = CO(2) + H(2)O.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- TISSUE SPECIFICITY: MUSCLE-SPECIFIC.
-!- TISSUE SPECIFICITY: OF THE EUKARYOTIC-TYPE CARBONIC ANHYDRASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24 PYAVRLTFHLPGDAPVTWA----FGRELLIDGGPRPCGDGDVHIAPADPE--TFGEVL-- 75

"Cloning and characterization of PAS5: a gene required for peroxisome biogenesis in the methylotrophic yeast pichia pastoris.";
J. Cell Biol. 128:535-548(1933)
-!- FUNCTION: INVOLVED IN PEROXISOME BIOSYNTHESIS. NECESSARY FOR MATRIX PEROXISOMAL PROTEINS IMPORT. ESSENTIAL FOR GROWTH ON OLEIC ACID AND METHANOL AS SOLE CARBON SOURCE.
-!- SUBCELLULAR LOCATION: IT MAY BE ASSOCIATED WITH THE CYTOSKELETON OR IT MAY BE CYTOPLASMIC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   667 LRDTLQLPLQFPELFSQGLKPRSGVLLYGPP---GTGKTLLAKAVATELSLEFVSIKGPE 723

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(23):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nin.go.jp/

It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for small overlap between neighbouring submissions.

Cosmid Q11 Cosmid Q11 lies between H24 and D78 on the AseI-Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              James, K.D., Parkhill, J., Barrell, B.G. and Rajandream, M.A. Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            transcriptional regulator, len: 301 aa; previously transcriptional regulator, len: 301 aa; previously sequenced as TR:Q53869 (EMBL:U37580) S.coelicolor lysR-like protein (301 aa). Highly similar to SW.ARAB_STRAT (EMBL:U3783), araB, Streptomyces antibioticus transcriptional regulatory protein (301 aa), fasta scores, opt: 1581 z-score: 1813.2 E(::0, 80.3% identity in 300 aa overlap. Similar to many other transcriptional regulators. Contains probable helix-turn-helix motif at aa 17.38 (Score 1659, 44.84 SD). Contains Pfam match to PF00126 HTH_1, Bacterial regulatory helix-turn-helix protein, lysR family and PS00044
                                                                                        795 aa; unknown function, previously sequenced as TR:053870 (EMBL:U37580), S.coelicolor hypothetical protein ORF5 downstream of phosphotyrosine protein phosphatase (159 aa). Weak similarity to the N-terminus of TR:069888 (EMBL:AL023797) Streptomyces coelicolor hypothetical protein (172 aa), fasta scores; opt: 158 z-score: 206.4 E(): 0.00036, 46.2% identity in 65 aa overlap. Continues as SCH24.40c in cosmid H24 (EMBL:AL049826)"

gene

CDS

```
methionine gamma lyase (398 aa), fasta scores; opt: 608 z-score: 653.6 E(): 4.5e-29, 36.98 identity in 404 aa overlap. Highly similar to TR:Q53668 (EMBL:X91393) streptomyces antibioticus hypothetical protein found upstream of the abaB gene (232 aa) (87.1% identity in 232 aa overlap). Contains Pfam match to PF01053 ac overlap. Cys_Met_metabolism plb-dependent enzyme and PS00868 Cys_Met_metabolism enzymes pyridoxal-phosphate attachment site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /translation="MSDSATTDSAGTGGERSASAPGDGTRAVRAGLPEPVKHEPTLPG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (URL; http://www.sanger.ac.uk/Projects/S_coelicolor/)
CDS are numbered using the following system eg SC7B7.01c. SC (S. coelicolor), 7B7 (cosmid name), .01 (first CDS), c (complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptomyces coelicolor sequencing at The Sanger Centre is funded

(EMBL:AF038651) Corynebacterium glutamicum GTP pyrophosphokinase (EC 2.7.6.5) RelA, 760
                                                                                                                                                                                             jun/cg1-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg. grg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If this cannot be the entire insert of the sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          len:

where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Blube et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /pore="SCI2.01"

                                                                                                                                                                                                                                                                                                                                                                                                               The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):478-4778(1994) as implemented at http://www.nih.go.jp/

Nucleic Acids Research, 22(22):478-4778(1994) as implemented at http://www.nih.go.jp/

Nucleic Acids Research, 12(22):478-478 as implemented at http://www.nih.go.jp/

Jun/cgl-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon. Tif this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most imposured clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlapp between neighbouring submissions.

Cosmid E19A lies between and overlaps cosmids E6 and E56 on the Asel-E genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /gene="SCE19A.01"

jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon at the sequence MAY NOT be the entire insert of the sequenced clone. If may be shorter because we only sequence coverlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                      3 (bases 1 to 32704)

Direct Submission
Submitted (03-AUG-2000) Streptomyces coelicolor sequencing project,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 'note" nominal overlap with Streptomyces coelicolor cosmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacterial regulatory proteins, luxR family and match to Prosite entry PS00622 Bacterial regulatory proteins, luxR family signature. Also contains a possible helix-turn-helix motif at residues 699. ,720 (+3.25 SD)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /gene="SCBAll.01"

```
codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

The length in codons is given for each CDS.

CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot http://www.nih.go.jp/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bentley.S.D., Parkhill,J., Barrell,B.G. and Rajandream,M.A. Bentley.S.D., Parkhill,J., Barrell,B.G. and Rajandream,M.A. Direct Submitssion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /gorde="SC5F2A.01c, ddah, dimethylarginine
finethylaminohydrolase, len: 258 as; hydrolyses
asymmetrically methylated arginine with preference
dimethylated arginine over monomethylated arginine
regulator; thiolase; transferase.

TR:086699 (EMBL:AL001515) UvrA-like protein from Streptomyces coelicolor (796 aa) fasta scores; opt: 2047, z-scores 12164.0, E(): 0, (51.9% excinuclease ABC subunit A from Escherichia coli (940 aa) fasta scores; opt: 634, z-score: 669.2, E(): 5.8e-30, (33.9% identity in 938 aa overlap). Contains two Pfam matches to entry PF00005 ABC_tran, ABC transporter and two. Prosite matches to $800017 ARP/GTP-binding site motif A process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /product-"UvrA-like ABC transporter"

TR:054381 (EMBL:X79146) from the lincomycin-production gene cluster of Streptomyces lincolnensis 78-11 (578 aa) fasta scores; opt: 1624, 2-score: 1696.3, E(): 0, (50.3% identity in 541 aa overlap). Contains two Pfam matches to entry PF00005 ABC_tran, ABC transporter, two Prosite matches to PS00017 ATP/CTP-binding site motif & (P-loop) and Prosite match to PS00211 ABC transporters family signature. Also contains a possible colled-coil region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complement(4739, .4762)
